## SUMMARY

Full-stack developer and automation engineer with production experience across regulated enterprise environments (nuclear, retail supply chain) and self-shipped AI-integrated platforms. Reduces operational overhead through data pipelines, CI/CD automation, and Python tooling – turning manual workflows into measurable efficiency gains. Seeking to bring that builder’s instinct to a high-impact engineering or data role.

## EDUCATION

### Honours BSc Computer Science, Business Focus

Expected May 2028

Lakehead University - *Dean's List 2025-26*

Thunder Bay, ON

- **Relevant Coursework:** Software Engineering, Data Structures & Algorithms (C/C++), Systems Analysis & Design, OOP

## TECHNICAL SKILLS

**Languages:** Python, JavaScript/TypeScript, C/C++, SQL, PowerShell, Bash

**Frameworks & Libraries:** React, Next.js, Node.js, FastAPI, pandas, pytest

**Data & Analytics:** PostgreSQL, MySQL, Teradata, MongoDB, Power BI, Excel (pivot tables, financial modelling)

**Cloud & DevOps:** Azure, Docker, GitHub Actions, Jenkins, CI/CD pipelines, REST API testing

**Tools:** Jira, Confluence, Bitbucket, Git, Microsoft 365

**Domain:** IT change management, compliance & audit, anomaly detection, Agile/Scrum

## PROFESSIONAL EXPERIENCE

### Nuclear Waste Management Organization (NWMO)

May 2026 – Present

*IT Analyst Co-op*

Toronto, ON

- Maintained **zero unplanned compliance incidents** across 4 concurrent workstreams by owning change management logs and risk registers in a federally regulated nuclear environment.
- Reduced incident resolution time by **15%** by engineering PowerShell and Shell automation scripts that replaced manual triage workflows; deployed real-time dashboards tracking SLA metrics and incident KPIs.
- Accelerated IT due diligence turnaround by consolidating vendor compliance documentation across fragmented systems, eliminating redundant manual cross-referencing across **10 vendor records**.
- Delivered 4 cross-functional technical solutions on schedule within Agile/Scrum ceremonies by translating competing stakeholder priorities into clear technical specifications.

### Loblaw Companies Limited

January 2026 – April 2026

*Inbound Schedule Analyst – Developer Co-op*

Brampton, ON

- Eliminated **500+ weekly manual transactions** across 3 distribution centres by architecting and shipping PrioTool, a Python/SQL application with a full CI/CD pipeline (Git, GitHub Actions), saving **~8 hours/week** of analyst time.
- Reduced deployment risk to near-zero by achieving **85% automated test coverage** (pytest, REST API integration tests), enabling continuous zero-downtime releases.
- Surfaced data quality discrepancies across **5 weekly records** by building Teradata and PostgreSQL queries that fed executive status reports and reconciliation workflows.

### Prshni Organisation

May 2021 – March 2023

*Full-Stack Developer / Business Analyst*

Remote

- Reclaimed **40+ hours/month** of manual data-entry overhead by shipping Python and Node.js automation services adopted as standard tooling across multiple business teams.
- Reduced requirements churn by leading end-to-end discovery sessions, converting operational ambiguity into system architecture documentation that cut delivery rework.

## PROJECTS

### Spot2Go – Full-Stack AI Booking Platform

September 2025 – Present

*React, Next.js, TypeScript, PostgreSQL, Docker, GitHub Actions, Azure*

- Shipped a **live production platform** serving real users with end-to-end CI/CD, automated testing, and Azure infrastructure; integrated agentic AI workflows to automate core booking operations.

### PhoneSense – Automated Data Pipeline

2025

*Python, SQL, pandas, Shell Scripting*

- Processed and anomaly-scored **50,000+ device records** through a Python/SQL pipeline with scheduled Shell automation and automated metrics reporting.

## ACHIEVEMENTS

### 2nd Place – Lakehead University CS Club Hackathon

April 2025

Designed, built, and shipped a full-stack Python/React application in **24 hours**; placed 2nd among **12 competing teams**.
